

During this assignment we have learned a lot about the basic do's and don'ts of website and their development.

What are some challenges that you and your team member faced? How did you go about addressing these challenges?

Coordination was a setback for our team. The time it took to coordinate schedules, arrange meeting timings and locations, meet, and then discuss what we want to do and, make decisions collectively, along with integrating the contributions of both members. This was one of the problems we faced, although it was simply conquered, we decided to message on Facebook along with consistently communicating via email. This allowed for both of us to have most up to date versions of file when working on it hence allowing for no overlap on the project. Secondly, we faced issues with implementing the calendar aspect of the website. Basically, we didn't know how to make it interactive with google calendar. This problem was easily fixed by the simple uses of piazza. On piazza we were given code and from there we discussed how to implement major dates on it. We concluded that we should only add lecture timing, tutorial timing along with finally the important dates for assignments and quizzes etc.

In Anna's website we realised there was a lot of stuff missing and that could be improved upon so we tried to touch upon some of this stuff in the design of our website as per the following

1 - the scaling element in Anna's website was missing as in it the website did not scale or respond well to different screen resolutions so this problem was addressed by not only scaling the body elements in our website but also adjusting font sizes and changing the location of the navigation bar in order to fit phone resolutions as well

2 - in Anna's website as well I felt that it was very bland and was trying to hide that fact by adding table elements which were unresponsive and mostly empty for some of their content. This was addressed by our website by adding div elements in grid form in order to give them style and make them responsive to clicking and hovering as well as easily being able to change them according to different screen resolutions

3 - I also felt the color scheme she used was very dark and unappealing which made the website "dark" so I used a brighter version in order to make the website more visually appealing

4 - A footer was not included in the website as well which could have been used to add important information which was added in our version of the website

5 - the font used in Anna's website was very bland as well which is why I used Times New Roman in order to make the font more professional looking

6- the hover effect used in annas website as well wasnt very eye catching that is why when in some parts the hovering in ment to show a picture preview of the most important part discussed this week in the lecture(ex. Week 1 when hovered over should show a preview of the syllabus and week 2 should show a picture of a relevant slide form the week 2 ppt) in order to make students lives easier when searching for a specified pdf

Finally, to conclude this report the assignment went smoothly as this is our second time pairing up as a team and we did not experience as much problems as expect.
